ASSET INSPECTION / DECISION SUPPORT SOFTWARE

Your device, inspect *anything*!
GraniteNet WebInspect

- GraniteNet WebInspect is a browser-based app for collecting inspection information about municipal assets such as Manholes and Hydrants, and performing Cleaning, Jetting, and GPS capture tasks.

- Run the new GraniteNet WebInspect browser-based app without installing any additional software!

- Streamline your operations with simple-to-use, map-driven tasks that can be completed using virtually any device with a web browser.

- Create more accurate and efficient business operations using WebInspect.

- Example: The cleaning crew completes their task successfully. Using a phone, the line is marked as "completed". The Supervisor in the office can view the updated real-time status in the map and schedule any additional tasks, like CCTV, against the cleaned line.

- Contact CUES today for a demo and see other types of assessment tasks available!
